

## LIGHT SHEET

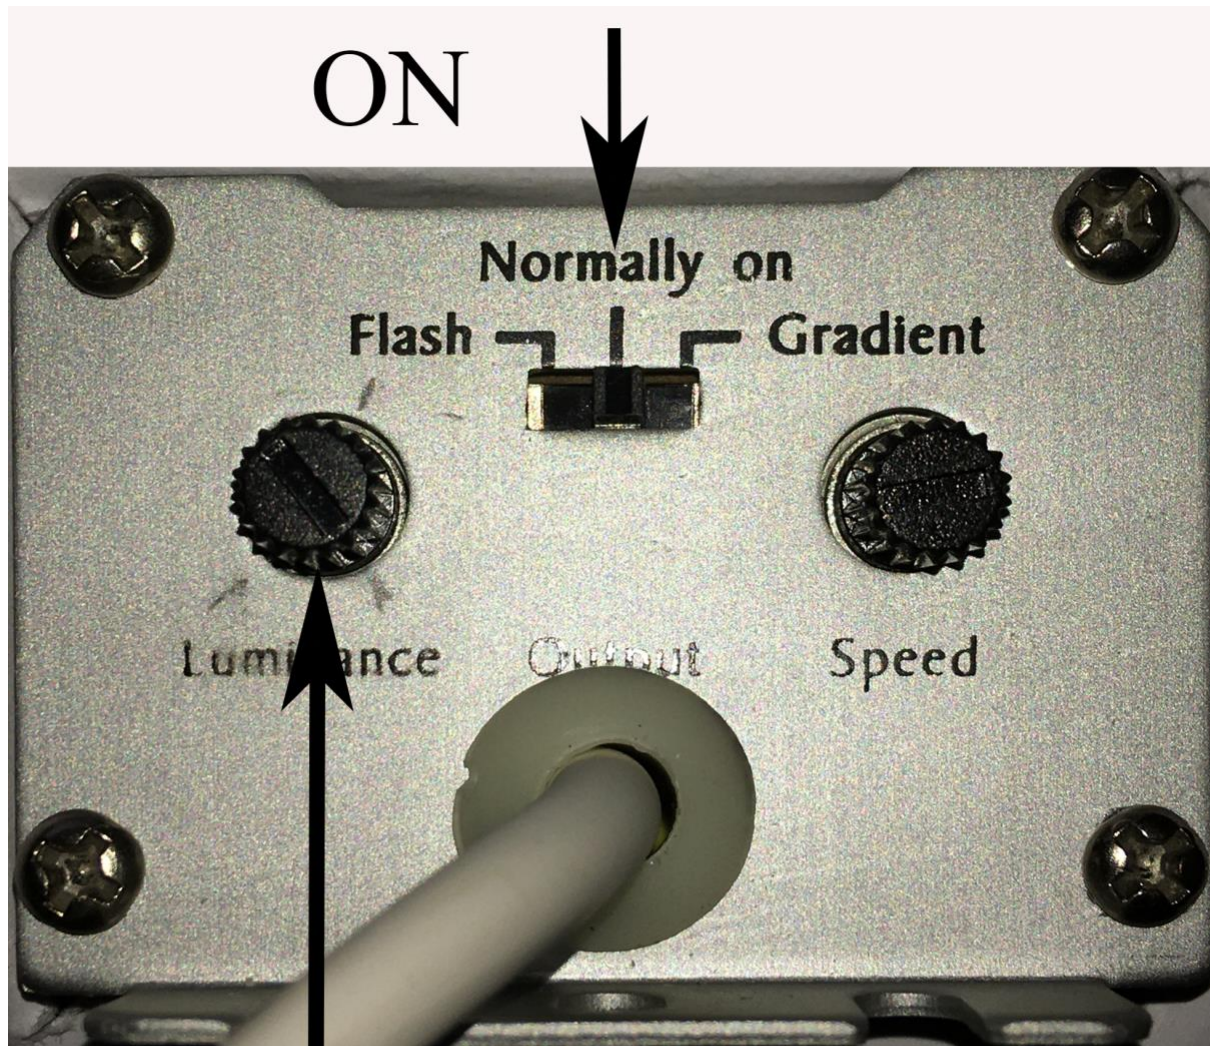

### INSTRUCTIONS

The A5 light sheet, when connected as below, remains cool and emits an even white light. There may be a quiet hum from the inverter when ON, which is normal. The light sheet is light sensitive and so it is to be stored in the dark when not in use.

Connect the mains lead to the silver inverter box and switch ON.

Select ON and turn Luminance clockwise for brighter.

Turn Clockwise for Brighter

The switch, with LED incorporated, between the inverter and the light sheet itself allows the light sheet to be turned ON or OFF as needed for imaging control.
